Webcam Video Online Recorder

Online Webcam Recorder by Media Line enables websites to easily allow their users to record and play back audio/video messages.

Working seamlessly on any website and requiring no special plugins besides the ubiquitous Flash plugin, any webcam is instantly recognized without need for tricky configuration.

Excellent deployments include: users recording their own a/v profiles, users sending and receiving a/v mail. Using Flash Communication server as its server application, this application can be deployed to allow full review and confirmation of all audio/video messages to assure the content meets the standards of the site. In addition, Media Line offers fully managed Flash Communication Server Hosting for this application.
